

# Setting MacOS 9 Multi-user

## 1) Setting your password

You need to make sure you know your computer password before enabling the multiple user feature in MacOS 9. Unless your very sure you know the password, do the following;

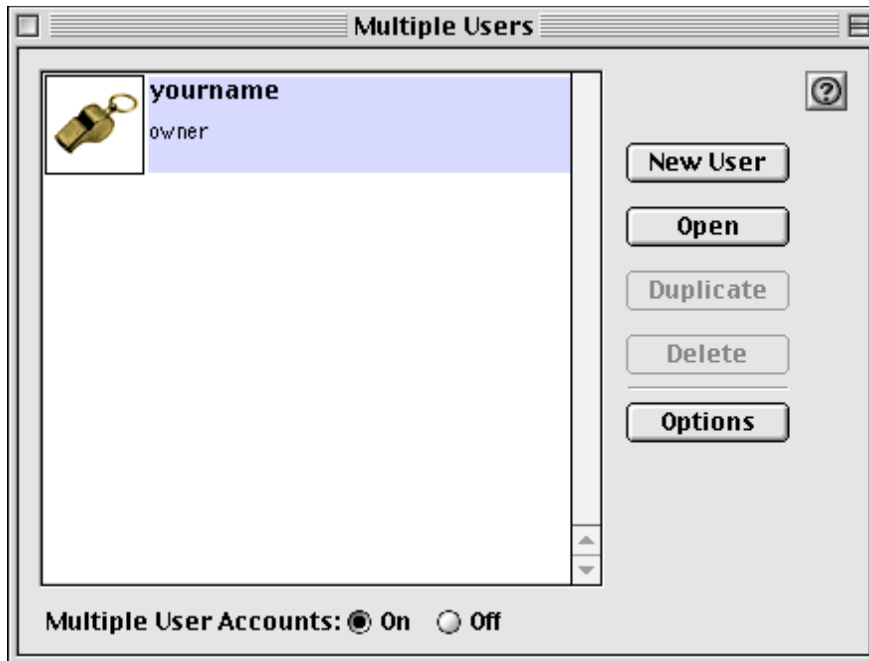

- open the File Sharing control panel
- set your password in the **Owner Password** field

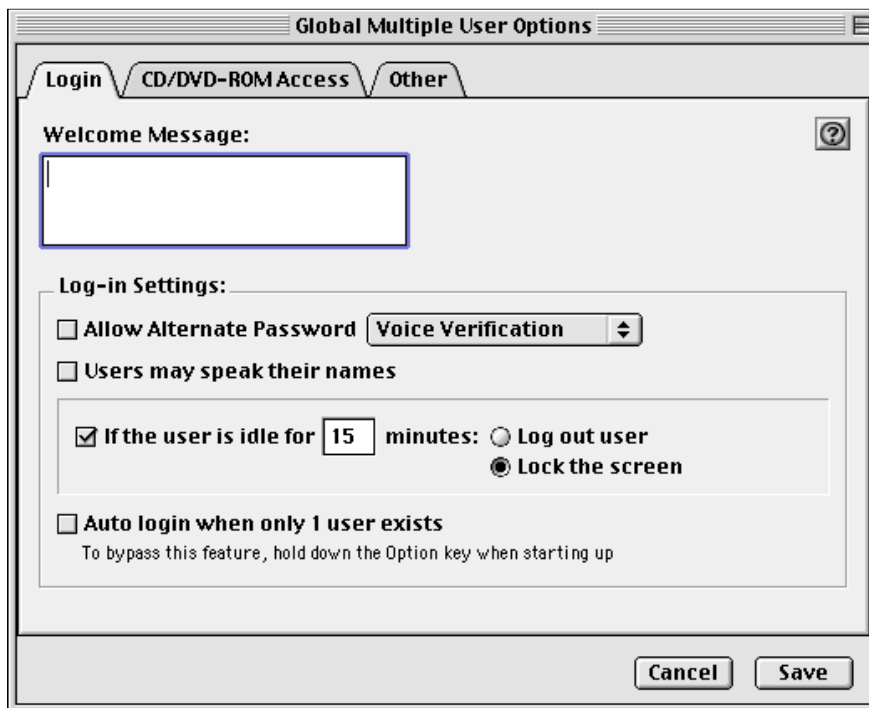

- Close the File Sharing control panel

## 2) Enabling Multiple User

- Open the Multiple User control panel
- Turn Multiple user on by clicking the button at the bottom

- click Options and enter the following settings

- close the Multiple User control panel
- Log out by selecting Logout from the Special menu and test your login
